## About Labris Networks Inc.

Since 2002, Labris Networks Inc. has been an R&D focused and rapidly-growing provider of network security solutions through its globally-proven products. Labris ensures ultimate network security through its extensive product line including Firewall/VPN, Web Security, E-Mail Security, Lawful Interception and Availability Protection solutions on LABRIS UTM, Labris LOG and Harpp DDoS Mitigator appliances. Next-generation solutions are developed to detect, identify all kinds of real-time threats, applications providing a smart shield against intrusions, viruses, spam, malware and availability attacks.

Labris products protect networks of all sizes with a variety of topologies and deployment scenarios. Through Labris FLEX firmware options, the customers have privileges to get the security software they need as well as extra modules such as Wireless Guest Authentication, Detailed Internet Reporting, Lawful Interception and Logging. Having a customer-focused, future-oriented and flexible approach, Labris also offers its state-of-the-art security software as a Cloud Service.

Having operations in a rapidly growing global network of more than 20 countries, Labris products protect enterprises, brands, government entities, service providers and mission-critical infrastructures.

Labris with its worldwide partners is committed to the highest levels of customer satisfaction and loyalty, providing the best after-sales support by the multilingual Global Support Center. Being one of the Common Criteria EAL4+ certified security gateway brands in the world and rapidly growing global player, Labris provides its customers the top-level security with optimum cost. Labris, headquartered in Ankara, Turkey, has offices serving Europe, Middle East, North Africa, Caucasus and Southeast Asia.

## About LABRIS UTM

Labris UTM is an Identity-based UTM Appliance. Labris UTM's solution is purpose-built to meet the security needs of corporates, government organizations, and educational institutions. Labris UTM's perfect blend of best-of-breed solutions includes Identity based Firewall, Content filtering, Anti Virus, Anti Spam, Intrusion Detection and Prevention (IDP), and VPN.

Labris UTM provides increased LAN security by providing separate port for connecting to the publicly accessible servers like Web server, Mail server, FTP server etc. hosted in DMZ which are visible to the external world and still have firewall protection. It also provides assistance in improving bandwidth management, increasing employee productivity and reducing legal liability associated with undesirable Internet content access.

Labris UTM is available for Small Enterprises , Medium Enterprises as well as Large Enterprises

Labris UTM Web Security provides further control to block inappropriate and illegal web sites as well as instant messaging and peer-to-peer applications while Labris UTM Application Intelligence and Control broadens control over inefficient web applications such as social media platforms (Facebook, twitter, etc.), online trading, IM/chat, peer-to-peer sharing and streaming video sites. Labris Email Security completes the offering with effective protection against spam and phishing attacks so employees only read legitimate emails and are not exposed to fake emails. Labris UTM's intelligent solutions simplify the centralized management of local and remote network services while protecting your precious information and communications resources with low TCO.

## How to Purchase LABRIS UTM

To purchase LABRIS UTM, Visit - <http://labrisnetworks.com/products/product/lbrlog-series>

You can purchase through authorized distributors <http://labrisnetworks.com/authorized-distributors/>

## Centralized Management

Central Management system provides administrators the ability to effectively manage remote Labris UTM devices. Administrators can monitor health status of remote Labris UTM devices and also manage these devices.

### Note

• You can also change your preferred language even after you login to the appliance as shown in following image

## Viewing Options in Central Management

When we Right click on “**Central Management Tab**” we find following options

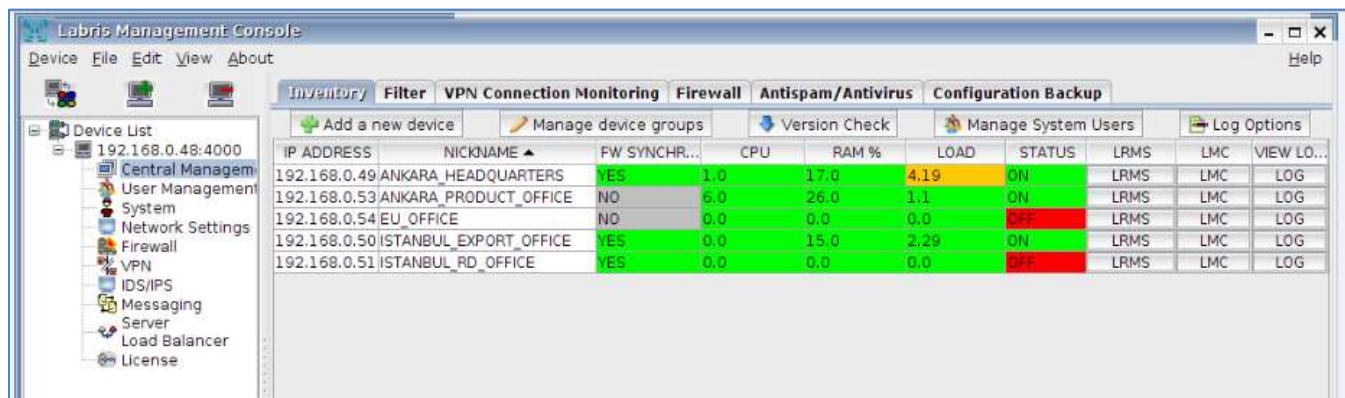

<b>1 – Connect</b>	Connects to Central Management module of Labris UTM
<b>2 – Disconnect</b>	Disconnects from Central Management module of Labris UTM
<b>3 – Properties</b>	Opens Central Management module properties window

## Inventory

**Inventory Tab in Central Management** allows administrators to administer and monitor remote Labris UTM devices.

## Inventory Table

Inventory table lists remote devices with their statuses. Administrators can edit, delete, enable/disable, restore these devices from inventory table. Also administrators can connect to LRMS dashboard and Labris Management Console of these remote Labris UTM devices' by clicking their LRMS and LMC buttons. Using inventory table administrators easily can view remote Labris UTM devices' logs by clicking LOG button.

Inventory table has 10 columns which are described below:

<b>IP Address</b>	Shows remote Labris UTM device's IP address
<b>Nickname</b>	Shows remote Labris UTM device's name
<b>FW Synchronized</b>	Shows whether firewall policy running on remote Labris UTM device is installed by Central Management system(YES) or firewall policy is installed locally by remote Labris UTM(NO).
<b>CPU</b>	Shows remote Labris UTM device's CPU usage
<b>RAM</b>	Shows remote Labris UTM device's RAM usage
<b>LOAD</b>	Shows remote Labris UTM device's load average
<b>STATUS</b>	Shows whether remote Labris UTM device is reachable
<b>LRMS</b>	By clicking this button administrators can connect to remote Labris UTM device's LRMS dashboard
<b>LMC</b>	By clicking this button administrators can connect to remote Labris UTM device's LMC
<b>LOG</b>	By clicking this button administrators can view remote Labris UTM device's logs

By clicking refresh button data on inventory table can be refreshed with the latest updates from remote Labris UTM devices.

## Manage Device

IP ADDRESS	NICKNAME ▲	FW SYNCHR...	CPU	RAM %	
192.168.0.49	ANKARA_HEADQUARTERS	YES	1.0	17.0	2.3
192.168.0.53	ANKARA_PRODUCT_OFFICE	NO			1.1
192.168.0.54	EU_OFFICE	NO			0.0
192.168.0.50	ISTANBUL_EXPORT_OFFICE	YES			1.6
192.168.0.51	ISTANBUL_RD_OFFICE	YES			1.1

By right clicking on an entry in inventory table administrators get a 4 row menu which is described below:

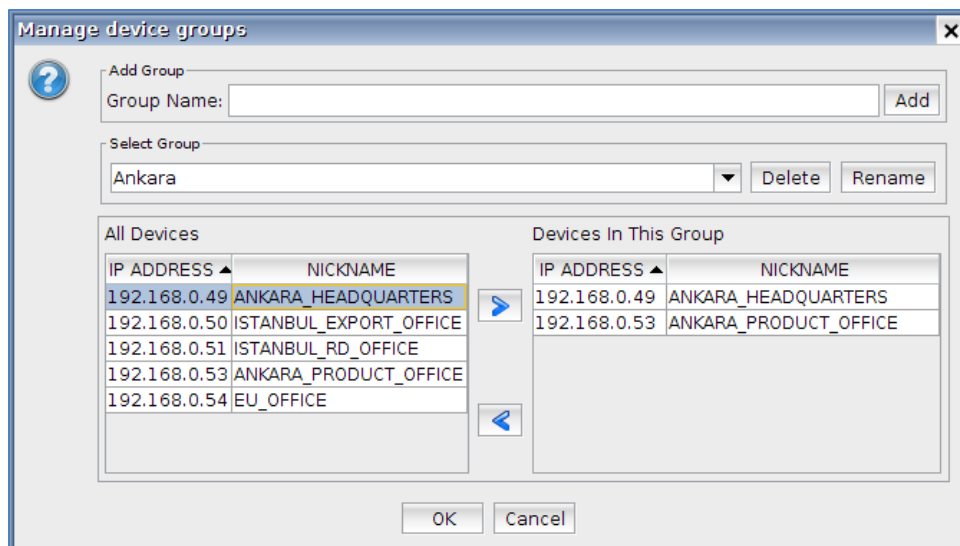

<b>Edit device</b>	Enables administrators to change remote Labris UTM device's connection IP and remote Labris UTM device's nickname
<b>Delete device</b>	Removes remote Labris UTM device from central management.
<b>Enable/Disable device</b>	Disables policy installations from Central Management to remote Labris UTM device
<b>Restore device</b>	Restores Central Management configurations on remote Labris UTM device

## Adding a New Device

By clicking "Add a new device" button administrators can add a new remote Labris UTM device to central management system. After clicking "Add a new device" button opens a window. In "Add a new device" window administrators set IP Address, Password and Nickname of the remote device.

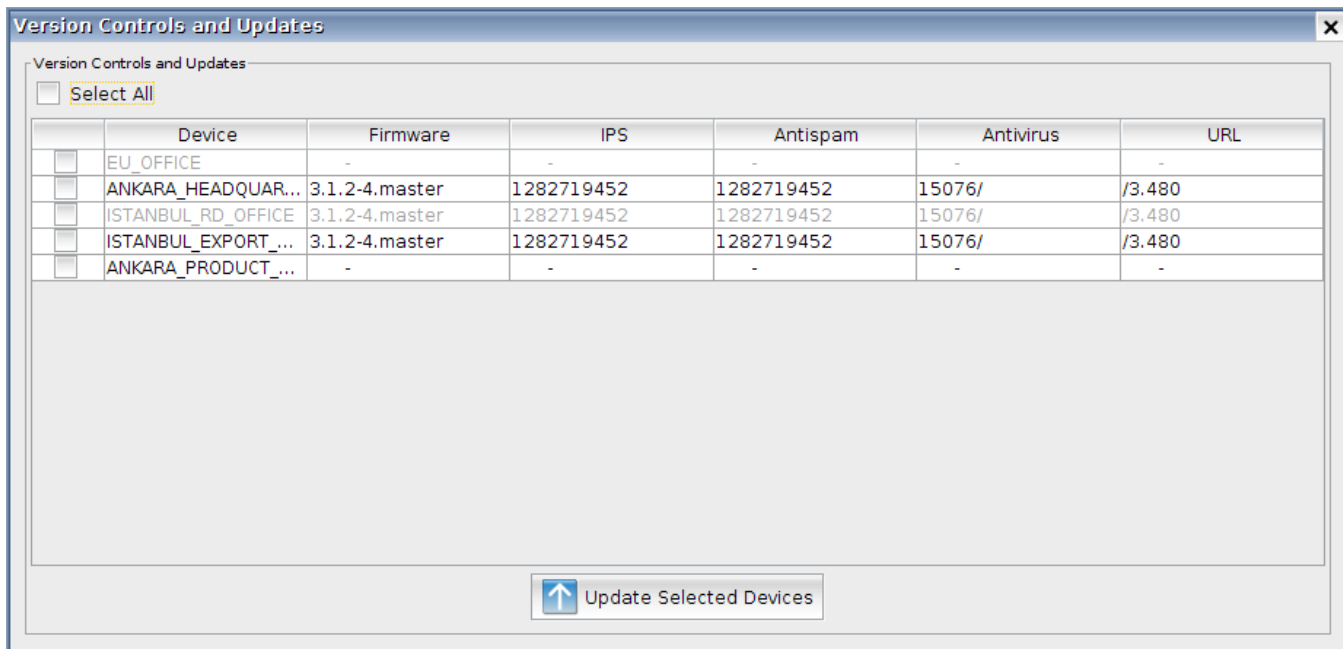

## Manage Device Groups

By clicking "Manage device groups" button administrators can create, rename and delete remote device groups. Remote Labris UTM devices can be added and removed from device groups. These device groups can be used as policy installation destinations.

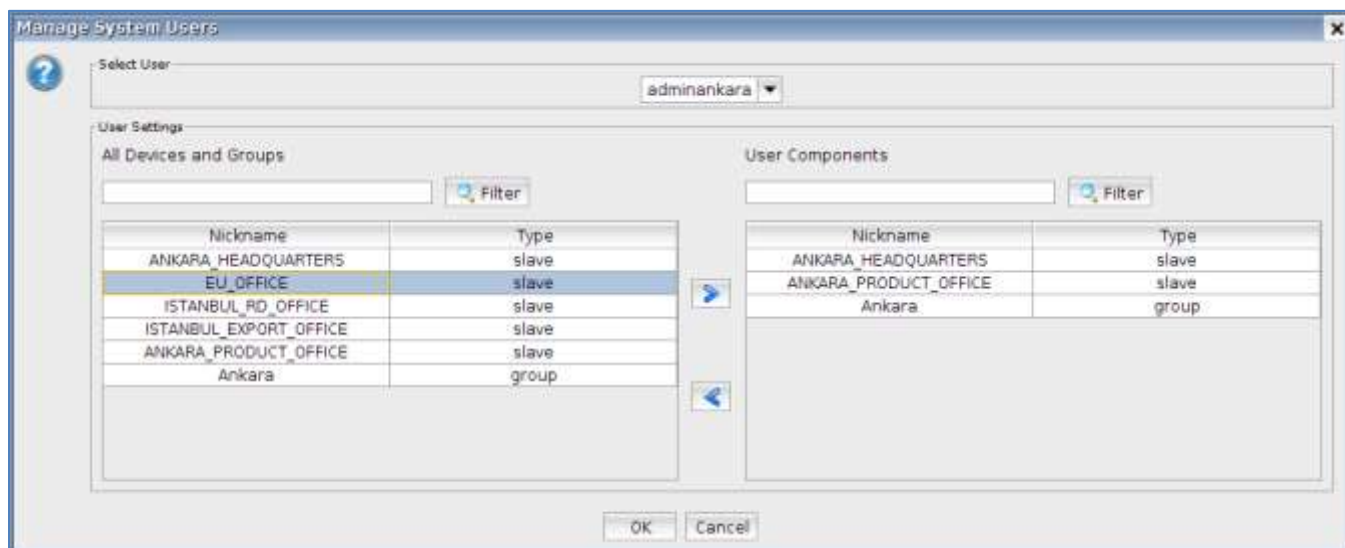

## Version Controls and Updates

By clicking "Manage device groups" button administrators can check version information of remote Labris UTM devices. In addition to this administrators can update selected remote Labris UTM devices' IPS, antispam, antivirus and webfilter url databases by clicking "Update Selected Devices" button.

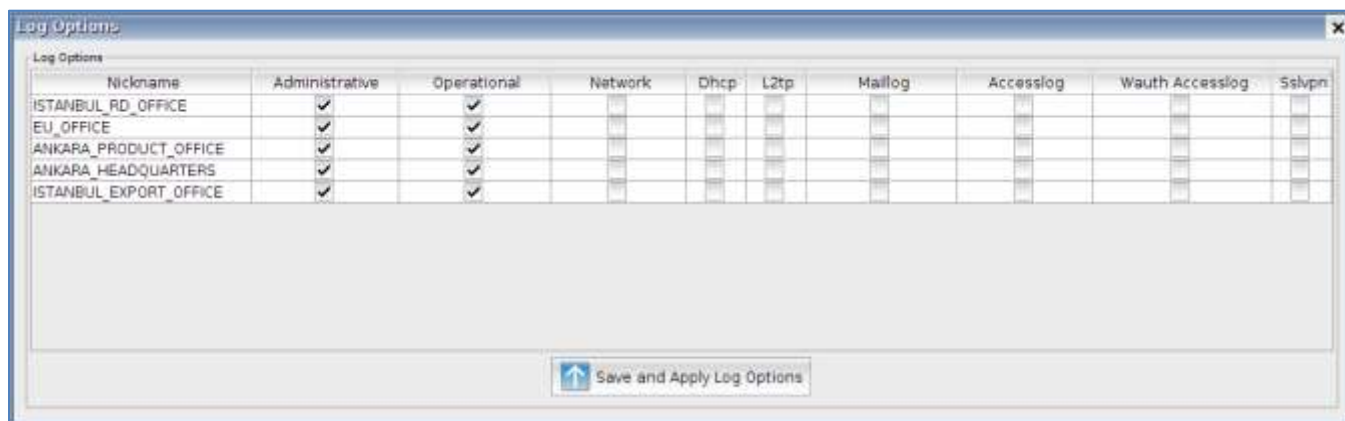

## Manage System Users

By clicking "Manage System Users" button administrators can permit system users to manage selected remote Labris UTM devices.

## Log Options

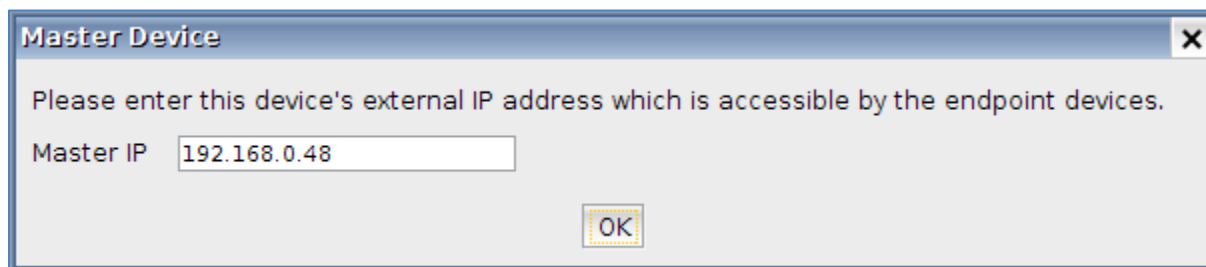

By clicking "Log Options" button administrators can select which logs to be received from remote Labris UTM devices. These logs can be viewed by clicking "LOG" button in inventory table.

## Edit Central Management IP Address

By clicking "Edit Central Management IP Address" button administrators can update Central Management device's IP address. This IP address is used when connecting to remote Labris UTM

devices and when receiving data from remote Labris UTM devices. So this IP address must be routable from remote Labris UTM devices.

## Firewall

Firewall tab in **Central Management** module allows administrators to manage firewall rules of remote Labris UTM devices.

**Important Note:** An initial firewall policy must be installed from the local LMC of remote Labris UTM devices. Only after installing an initial policy, firewall rules can be installed from Central Management.

The differences of the Firewall Module in Central Management from the standard UTM firewall modules are listed below:

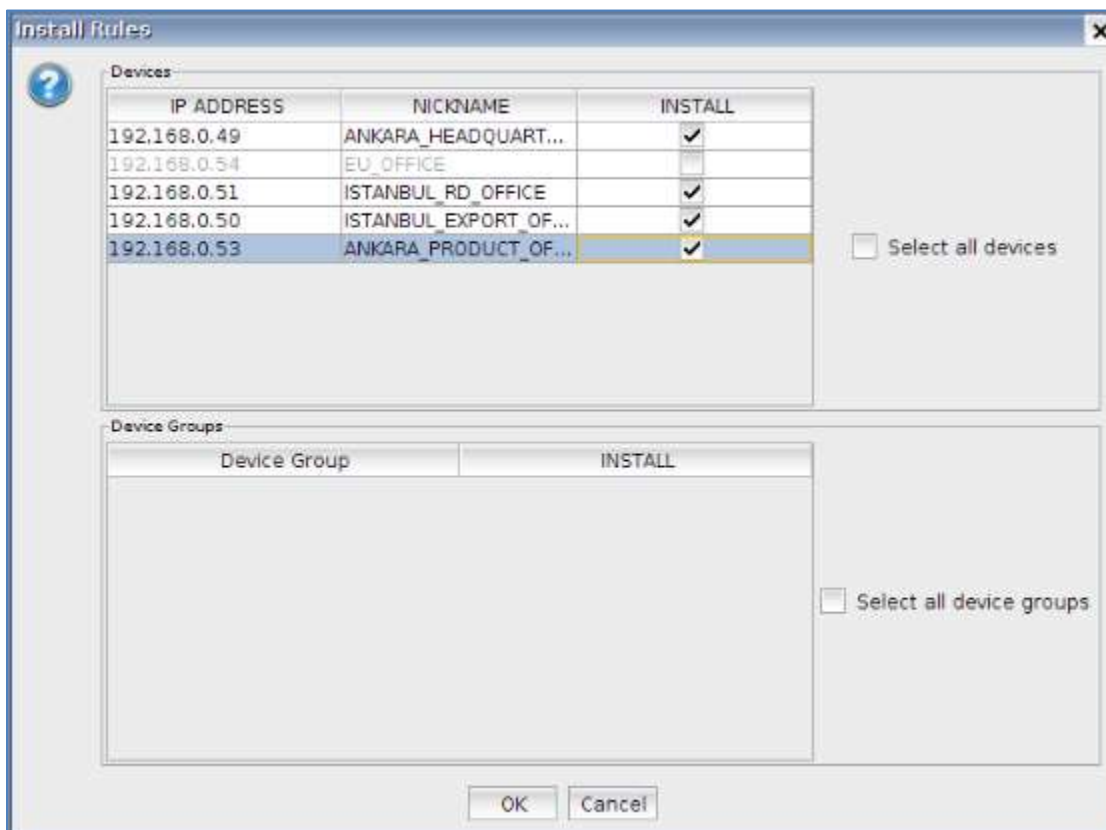

**1) Dynamic Network Objects** in Objects Folder: When creating a dynamic network object, the object's value should be set for every remote Labris UTM devices. As seen in the picture below, when the firewall policy is installed on remote Labris UTM devices, the dynamic network objects will be seen and used as standard network objects with their respective values.

**2) Install On Column in Policy Table:** Devices and Device Groups can be used in this column. Each rule will be installed to the devices in this column. With this column you can install different rules to different remote Labris UTM devices.

No.	Source	Destination	Service	Action	Schedule	QoS/Bandwidth	Applications	Security Policy	Options	Install On
0	Any	!fractal_bill_sistemi	Any	Accept	Any	Any	Any	Any		192.168.0.50-ISTANBUL_EXPORT_OFFICE 192.168.0.49-ANKARA_HEADQUARTERS
1	Any	!fractal_bill_sistemi	Any	Deny	Any	Any	Any	Any		192.168.0.51-ISTANBUL_RD_OFFICE 192.168.0.53-ANKARA_PRODUCT_OFFICE 192.168.0.54-EU_OFFICE
2	!labris_network	Any	Any	Accept	Any	Any	Any	Any		Any
3	Any	Any	Any	Deny	Any	Any	Any	Any		Any

**3) Install Policy button:** This button opens a new pop-up to select which device or device groups will receive the firewall policy.

And the results are shown as below:

IP ADDRESS	NICKNAME	RESULT
192.168.0.51	ISTANBUL_RD_OFFICE	✓
192.168.0.50	ISTANBUL_EXPORT_OF...	✓
192.168.0.49	ANKARA_HEADQUART...	✓
192.168.0.53	ANKARA_PRODUCT_OF...	✓

## Antispam/Antivirus

**Antispam/Antivirus** tab in **Central Management** module allows administrators to manage antispam, whitelist and blacklist and antivirus options of remote Labris UTM devices. Detailed usage of this module is explained in its own section.

To send antispam/antivirus configurations to remote Labris UTM devices click save and then Install button.

**Install** button opens a new pop-up to select which device or device groups will receive the antispam/antivirus configuration.

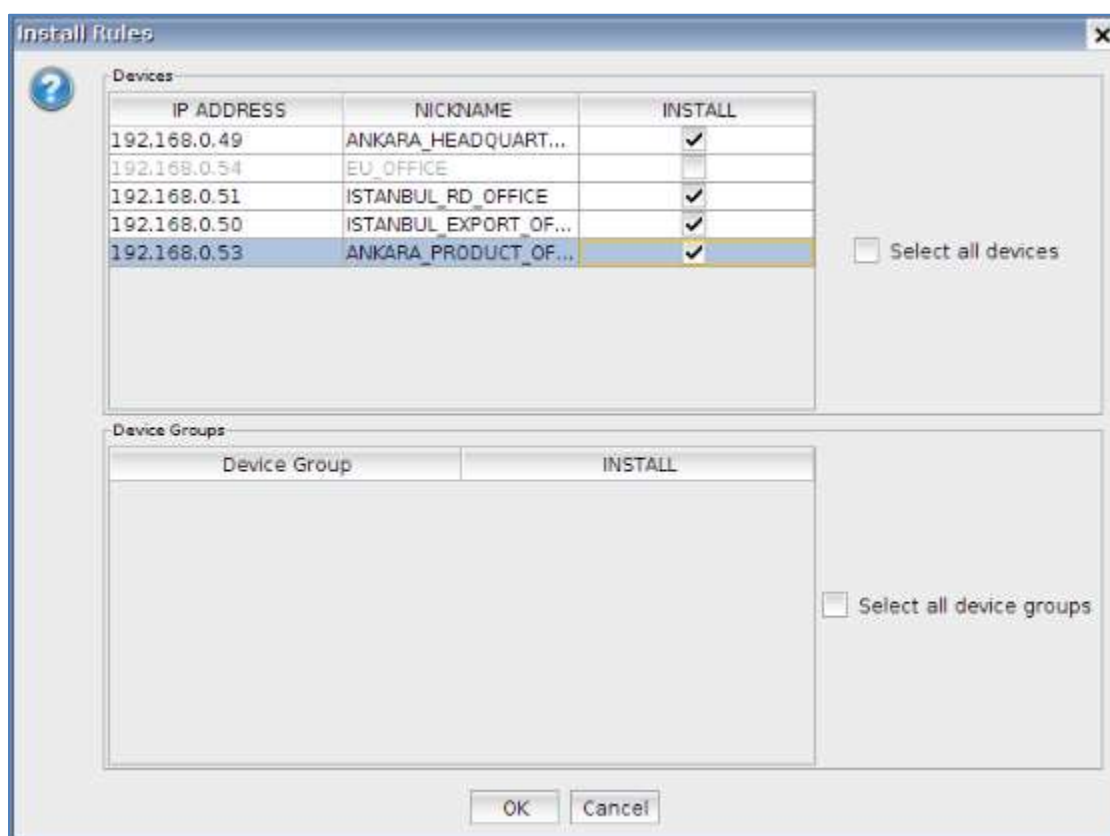

## Filter

**Filter** tab in **Central Management** module allows administrators to manage filter configuration of remote Labris UTM devices. Detailed usage of **Filter Groups**, **Banned Filters**, **Exception Filters** and **Configuration** tabs is explained in their own sections.

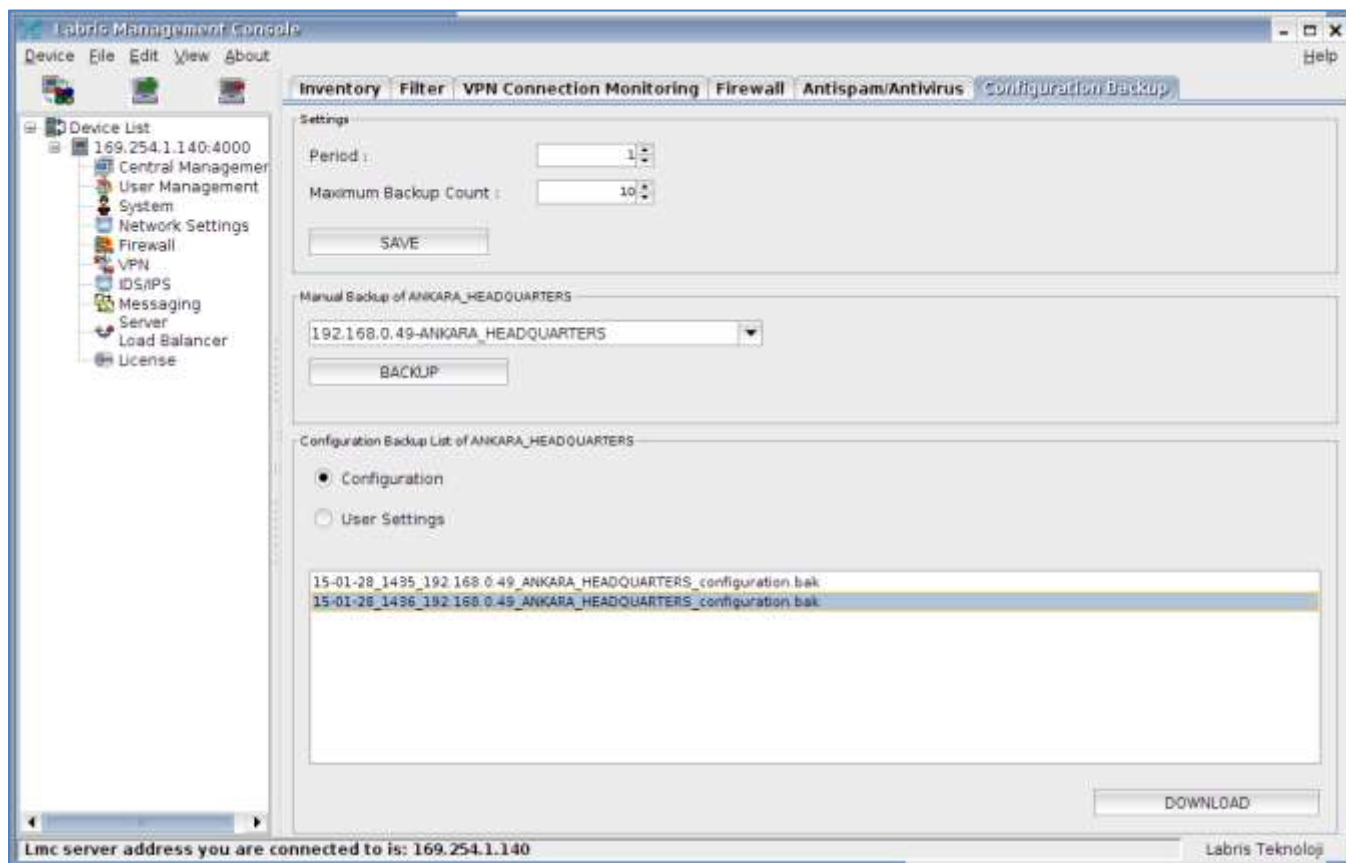

Only **Central Management** specific option is **Install** button in **Filter Groups** tab.

**Install** button opens a new pop-up to select which device or device groups will receive the filter configuration.

of every Labris UTM device at specific time intervals. The administrator can set the backup frequency on the basis of days and the maximum backup count per remote Labris UTM device.

Backup-Restore policy is different for devices joined to Central Management. For devices joined Central Management restore stage is same with single Labris UTM device except user, group and domain restore process. In Central Management system, remote Labris UTM devices' user, group and domain data is not restored from backup file.

User, group and domain data is only restored when backup is restored on Central Management device. In this case all user, group and domain data in remote Labris UTM devices' is overwritten by the restore user, group and domain data.

## User Management

Users, groups and domains are shared between Central Management devices and remote Labris UTM devices. This feature allows writing policies for same users and groups among all remote Labris UTM devices.

Remote Labris UTM devices can only edit users and groups which belong to that device's domain or that device's Active Directory domain, other users, groups and domains are read-only for that device.
